Welcome to My Sticky Notes Version 2.0.

My Sticky Notes is a Microsoft Windows desktop application which allows you to create and store any kind of note.

This is MORC Creations second release of the My Sticky Notes product. Originally released in 2021 this product has proven to be quite popular with our MORC Creations followers and we have received some excellent feedback and ideas on how to improve and enhance this product with some new features and feature updates.

Starting with this release the My Sticky Notes Application Suite now consists of two applications:

- My Sticky Notes
- My Sticky Notes Visualizer – an all-new note visualizer

My Sticky Notes

The My Sticky Notes application allows for the creation of one or more notes. Each note can be toggled to stay on top of other running applications or not and has a large range of new editing features.

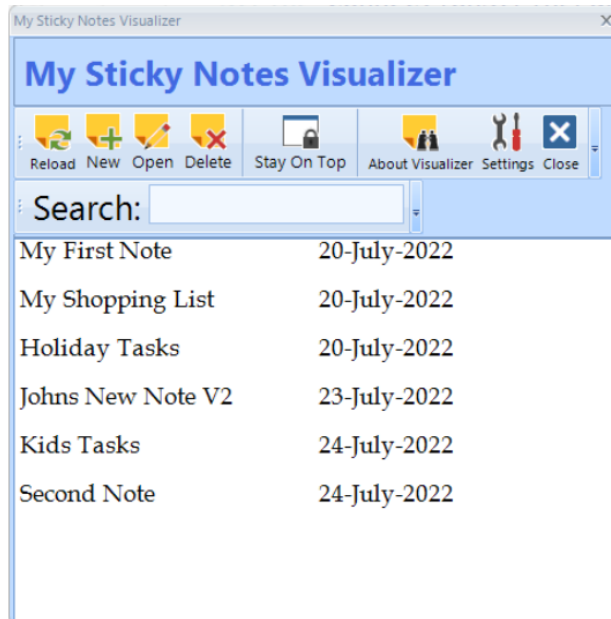

The My Sticky Note screen is shown below.

My Sticky Notes Visualizer

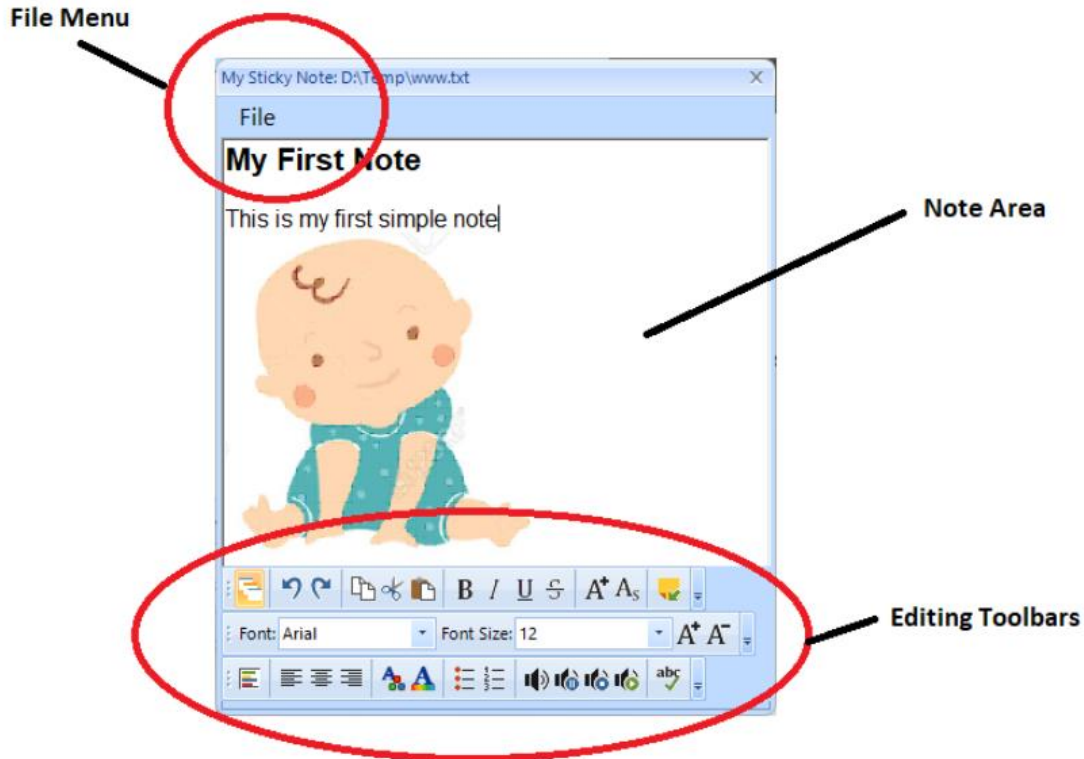

The all new My Sticky Notes Visualizer allows you to view all your notes in one place. You can even create new notes or edit or delete existing notes from within the My Sticky Notes Visualizer.

The My Sticky Notes Visualizer screen is shown below.

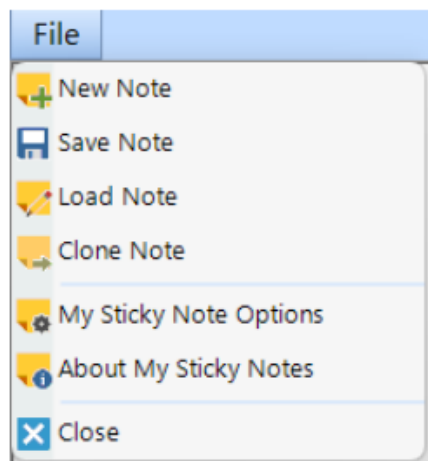

My Sticky Notes

The illustration below shows all the different areas within the new My Sticky Note screen.

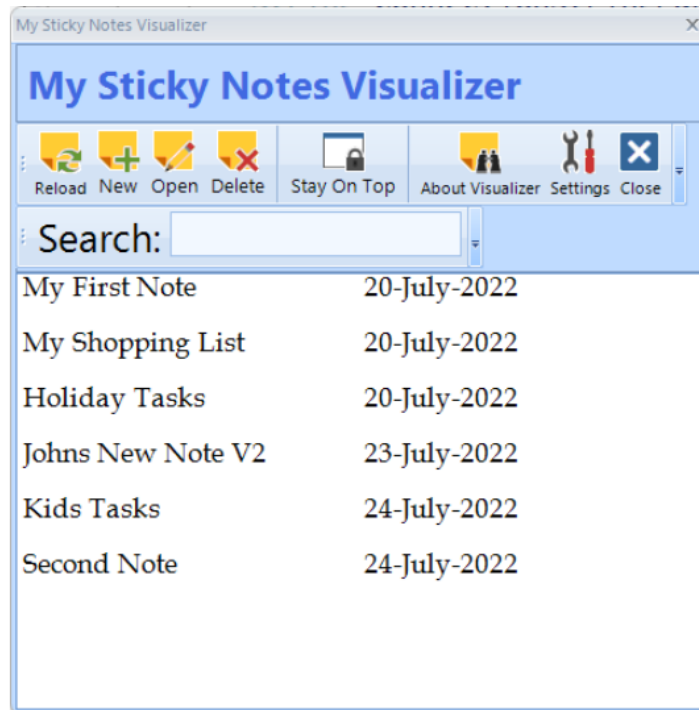

The Editing Toolbars at the bottom of the note screen provides editing functionality for text editing and alignment, insertion of images and for speech and spell checking.

The File menu, shown below, contains all functionality relating to Notes and Note management.

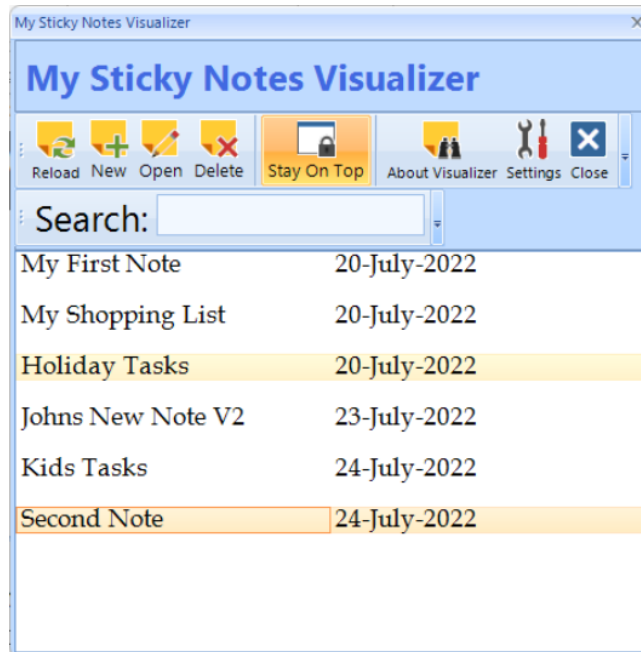

My Sticky Notes Visualizer

The all new My Sticky Notes Visualizer is shown in the illustration below.

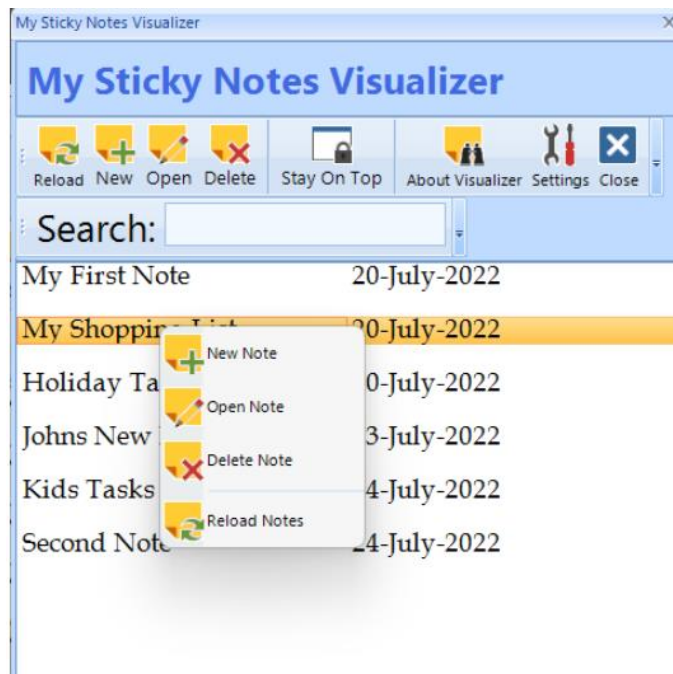

The 'Stay On Top' toggle button allows you to nominate if you want the My Sticky Notes Visualizer to stay on top of all the other application at all times, or not.

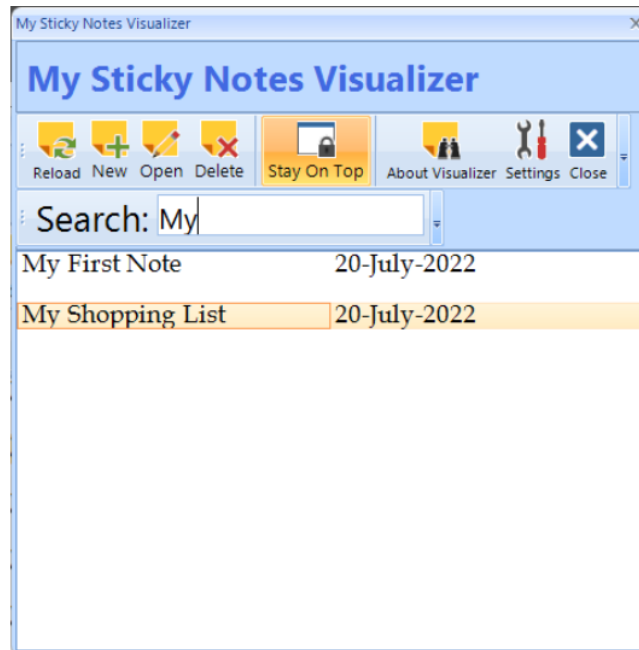

The image below shows the 'Stay On Top' feature turned on (the toggle button is On) and now the My Sticky Notes Visualizer will always stay in front of all other applications.

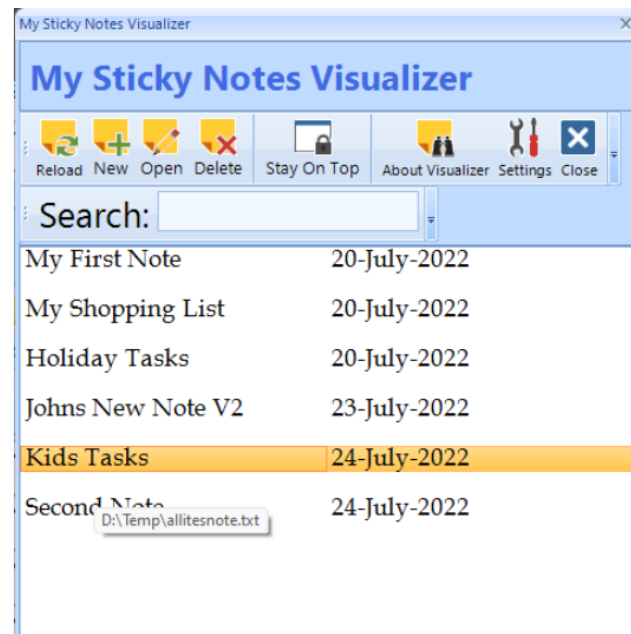

If you select a Note within the notes area and then click the right mouse button a pop-up menu appears. This menu replicates many of the functions available on the main toolbar and provides a quick way to access these items.

The Search Box at the top of the screen aids you in finding the Notes you're looking for. As you type your search term into the Search Box the note list automatically updates to remove the notes that don't match your search term item, as shown below.

If you hover your cursor over a selected note, it will display the path and file name of your note, as shown below.

The Settings screen allows you to change the font and font size of the note information shown in the note list. These settings are saved and reapplied the next time you open the My Sticky Notes Visualizer.
